# Supernova

High Intensity Discharge

## HID vs Halogen

HID lights are 3 times brighter than halogen lights.

HID lights last up to 10 times longer than halogen lights as they do not have a filament in the bulb.

HID lights produce much less heat than a halogen light, so there is a reduction in the burning of the lens and reflector.

HID lights draw 60% less power than a halogen light. This allows you to use 4 HID lights and still use less power than 2 halogen (100W) lights.

Polycarbonate Lens Cover

High Impact ABS housing

All Hardened Glass Lens

35 watt HID Bulb

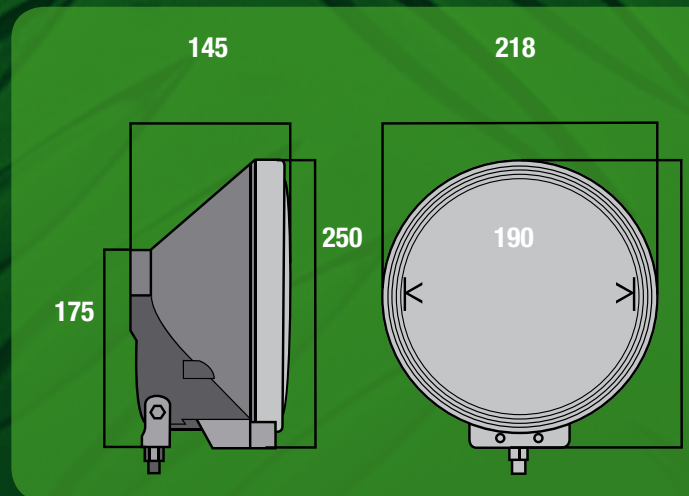

Internal Ballast

Amperage draw:  
2.9 amps

- Internal Ballast
- 35 watt HID Bulb
- High Impact ABS housing
- Polycarbonate Lens Cover
- Hardened Glass Lens
- Amperage draw: 2.9 amps
